

POINTING DEVICE

5

ABSTRACT OF THE DISCLOSURE

10 A pointing device including a base part, an
operating part supported on the base part in a rockable
manner about a fulcrum, a magnet carried on the operating
part, a magneto-electro transducer carried on the base
part, and an elastic member arranged between the base
15 part and the operating part to elastically push the
operating part toward an initial balanced position on the
base part. The elastic member is formed as a plate
spring provided with a first section engageable with the
base part and a second section engageable with the
operating part. The second section is integrally joined
20 to the first section and located to extend around the
fulcrum. The first section of the plate spring extends
annularly around the fulcrum and is fixedly supported on
the base part, and the second section extends arcuately
along the first section to exert a spring action.
